How to read this report

- Checks refer to numbered JSONL evidence files in the accompanying folder.
- Gold is a summary layer; Silver is payment-level detail. Recorded build reconciliation is not a new reconciliation.

Terms used in this report

Term	Meaning
Net revenue	Successful subscription and PPV charges less successful refunds, booked at success in USD.
PPV	Pay-per-view purchase.

01. Chapter

The answer

01

The premise is not supported for the agreed comparison: September 2026 net revenue rose $355.58 (3.62%) from August, from $9,819.93 to $10,175.51 (check 4).

- Subscription net revenue rose $339.66; PPV rose $15.92. Together they reconcile to the $355.58 increase (check 5).
- More initial subscription charges were partly offset by fewer renewals; this is an accounting decomposition, not a proven explanation of customer behavior (check 7).
- Confirm whether a different KPI or period motivated the original concern.

02. Chapter

How we investigated

02

What data we used

- Latest two complete months in documented coverage: August 1–September 1 and September 1–October 1, 2026, UTC, start inclusive and end exclusive.
- PocketToons synthetic SQLite; users snapshot timestamp 2026-09-30T23:59:59Z. This is recorded metadata, not a verified database hash or freshness guarantee.
- Revenue group v1.1; payments booked at success, not earned revenue spread across a subscription period.
- Build 3a0dbed21d2f45958aefa2887a0cadd8 succeeded; checks in the build record report revenue reconciliation. The current registry file hash differs from the recorded build hash, so exact source-version equivalence is unverified (check 3).

Investigation path

- Independent mode; no evaluation materials, prior answers, generator answer-bearing README, or question-specific guides were consulted.
- Validated schema, snapshot and build; checked baseline, revenue types, payment quality and successful payment subtypes. Stopped after the stated decline was disproved for the chosen periods.

03. Chapter

What happened

03

The movement

Measure	August	September
Gross charges	$9,831.91	$10,177.50
Refunds	$11.98	$1.99
Net revenue	$9,819.93	$10,175.51
Paying users	1,009	1,050

Who drove it

Net revenue component	Aug → Sep	Change
Subscription	$9,760.23 → $10,099.89	+$339.66
PPV	$59.70 → $75.62	+$15.92
Unattributed refunds	$0 → $0	$0
Total	$9,819.93 → $10,175.51	+$355.58

- Gross charges increased $345.59 and refunds fell $9.99, giving a net increase of $355.58 (checks 4–5). August has 31 days and September 30.

04. Chapter

Why it happened

04

Hypothesis	Status	Evidence
Net revenue declined	Rejected	September exceeded August by 3.62% (check 4).
Subscription accounts for most of the increase	Supported	+$339.66 of +$355.58, about 95.5% (check 5).
More initial subscription charges explain gross movement	Supported, arithmetically	Initial charges +$459.54; renewal charges −$129.87; PPV charges +$15.92. Refund improvement +$9.99 (checks 5, 7). Underlying causes untested.

05. Chapter

Data quality and limits

05

Data quality

- Build log reports succeeded and all recorded reconciliation checks true; no independent rerun of full reconciliation (check 3).
- All payment rows in the checked event-time buckets have valid curated amounts and an OK Silver status (check 6).
- Reviewed source corrections: two August subscription payments totaling $19.98 and one September payment totaling $9.99 in curated values (check 8). Timing and impact of source errors before correction are not established.
- Current registry SHA-256 4b5b2f0e881666570ace017c06ff1bca380fff83c8dfa679317706e6a8815554 differs from build-recorded registry SHA-256 57b21d71027782fc28c8ea7eea4eb0dd9ed18273577d81bf00eaded632ff1227. Both label revenue group v1.1; semantic differences have not been ruled out.

Limitations

- The data coverage ends September 2026; it does not establish current real-world performance. The dataset is synthetic.
- No causal mechanism, behavior change, experiment, or counterfactual was established. No alternate KPI or period was tested as the intended concern.
- The repository is a downloaded directory without Git metadata; commit and actual download date cannot be verified. AGENTS.md file modification time is November 9, 2026, 20:12 IST; this is not proof of download date.

06. Chapter

What to do next

06

01 Clarify the original KPI, comparison period, and decision before diagnosing a decline.

02 Review why initial subscriptions increased and renewals decreased using cohort and lifecycle data, if that is relevant to the decision.

03 Verify the build registry version against the current registry before using this result for production decisions.
